

Comcast Business At Home

One more way we are keeping Federal Agencies connected!

Comcast Government Services, LLC understands Federal employees need fast, reliable internet access while working at home, especially for email, teleconferencing, and access to CRM systems and collaboration tools. But while working from home, you and your employees may be competing for bandwidth with other household needs such as connected TVs, distance learning efforts, and any other connected devices.

With Comcast Business Internet from Comcast Business At Home, you'll have the bandwidth you need to power all your connected devices, allowing you to download in seconds what used to take minutes.

Comcast Business Internet is supported by the nation's largest Gig-speed network with 24/7 customer support.

Comcast Business At Home helps your agency and employees by providing:

Reliability

Dedicated, fast, reliable Internet connection with no data caps, safely installed, with optional static IP.

Flexibility

No minimum or maximum; add as many employees as you need at different locations.

Convenience

Each employee's service is billed to your company's Comcast Business account.

Did You Know?

The U.S. Telecommuter Workforce is expected to grow to 45M employees with 66% of these workers telecommuting almost every day (20% of the total U.S. workforce)!¹

The top 5 applications¹ used by remote workers are:

- 1 Email
- 2 Video conferencing
- 3 Collaboration tools
- 4 CRM systems
- 5 Cybersecurity tools

All of which need fast, reliable Internet.
